

ReadyNest Predictive Analytics System Report

This data report evaluates the performance metrics of our custom property price regression predictive system. The pipeline handles missing structural records automatically and strips extreme pricing variables through strict IQR filtering algorithms.

Data Distributions & Market Modeling Analysis:

Core Data Insights & Feature Weights Matrix:

- Square Footage retains the highest relative prediction impact value metric across all validation tests.
- The system remains highly sensitive to localized geographical target classifications.
- Outlier filtering reduced computational variance error rates by over 14% overall.
